**The 10
Commandments
for Beating
Roulette**

**Ten Roulette Strategies
for Greater Profits**

The Ten Commandments for Beating Roulette

Next to slots and video poker, the roulette has long been considered as the third most popular casino game worldwide. It is much more popular in Europe and other non-American gambling destinations, and the roulette wheel remains as a universal symbol of gambling around the world.

Well, what makes roulette popular in the first place is its uniqueness. The game is not the same in Europe and America, that is why there are two types of roulette wheel: the European roulette wheel and American roulette wheel. Also, the game is fun and uncomplicated. The players can play without having to worry about how to increase their winning potential.

Although roulette is easy to play, winning the game is not easy as it seems. If you want to beat roulette, there are some strategies you need to take. By following these strategies, you will surely be well on your way to playing roulette like a pro.

Here are your ten roulette strategies that could give you greater profits:

Strategy #1: *Know and Understand the Game*

Of all the helpful roulette strategies, knowing the game is perhaps the most obvious one. Well, all you need to do is to take a little extra time to learn the game. Make sure to know the object of the game, which is to pick the winning number that will appear on the roulette wheel. In the game, the player can bet combinations of numbers or select the color or whether it is odd or even.

Aside from that, know the roulette rules. Perhaps the most important thing to note when it comes to the roulette rules is the table minimum and how it works. Note, in the first place, that there are two main types of roulette, the European and American roulette. Each of these types has its own rules to follow in order to win the game.

The odds of roulette, as well as all the bets and other aspects of the game must also be considered. Knowing all these things will make you realize what exactly to expect when you start to play roulette.

Strategy #2: *Note that Roulette is a Game of Chance*

As you may know, roulette has long been classified as a game of chance. Thus, unlike mathematics in which you know what is definitely going to happen, in roulette you never know what is going to happen. The main support for this is the fact that the balls used in the game have no memory. Every spin is unrelated

to the last spin and has no influence on the next spin. If, for instance, a ball lands on black, the chances of it landing on black next time are 50-50.

Also, if the ball lands on black a hundred times in a row, the chances of it landing on the black on the following spin still remain 50-50. So, if you understand this basic nature of roulette, then there's a great possibility that you won't fall prey to the common misconception that a number is "due" because it hasn't come up for a while.

Strategy #3: *Don't Apply a Roulette System*

Millions of casino patrons these days have tried to find a method of beating any negative expectation game in an attempt to gain the elusive upper hand. Of these casino patrons, the roulette system seekers are no exception.

The truth is that it has long been noted that the notion of roulette system is a myth. As you may know, there are a number of people out there selling systems who advertise themselves as having 30 years of experience and the system is tested for more than 15 years along with other reasons to make you believe that they can break the laws of probability or physics. Well, perhaps the main reason that these roulette system sellers nab their victims is that it is easy to convince someone of a roulette system that works. Consider the fact that in roulette, the odds against you are pretty standard for every bet on the board, at a somewhat 5.26 percent house edge. This then implies that the house will win 5.26 percent more of the bets on the table than they lose, which is true if you've been paying to the casino. So, if you bet on two columns on similar spin at the table, the odds are you will win 24-14. The question is, how is it that the casinos don't go broke? Well, let us dispel this false logic right now.

The roulette systems like the Martingale system, Fibonacci system, and Martinez system are just plain theories. None of them have been proven to overcome the casino's advantage. As what most pros often say, the players trying these systems will inevitably lose sooner or later. Plus the fact that the roulette is a game of "chance" clearly suggests that the roulette system by its very nature cannot work, as there is no reliable past data you can base a system on.

Strategy #4: *Consider the European Roulette*

There are two types of roulette: the American roulette and European roulette. The difference between the two basically lies on the number 0's on the wheel. Note that in American roulette, there are two zeros: the zero (0) and the double zero (00), which increases the house advantage to 5.3 percent. On the other hand, the European roulette has only one zero, then giving the house an advantage of only 2.7 percent.

Furthermore, such two versions of roulette use chips differently. In the first place, the American roulette uses the so-called "non value" chips. This means

that all the chips belonging to the same player are of the same value determined at the time of the purchase. In return, the player cashes in the chips at the roulette table.

On the other hand, the European roulette employs the standard casino chips with different values as bets. This is actually what makes the game more confusing for both the dealer and the players. However, confusing as it may seem to play in European roulette given that it has different chips with different values as bets, many experts still agree that if you want to obtain the odds in your favor right away, the European roulette is the best option to take.

Strategy #5: *Know the Odds of the Bets*

The game of roulette offers a wide variety of bets and betting options. With these betting options, the outcome of every spin of the roulette wheel is independent of any other and is not influenced by the previous spins. So, even if you have ten black numbers after ten spins, the probability of getting red in the next spin is the same as to get black.

Since roulette is a game of pure chance, it is then important that you know the odds of the best and only place the ones with the best chance of success. How to calculate the odds of roulette? Well, it's just very easy. Note, in the first place, that the roulette wheel is divided into either 37 or 38 slots, depending on whether you are playing the European version or the American version which has an extra space in the double zero (00) slot. The spaces marked zero represent the house edge, and in single zero roulette, the house advantage is 2.7 percent, while 5.26 percent for the double zero game. So, if you are playing the European roulette with only single zero the formula for calculating the odds of roulette is simply $(35 - 36)/37 \times 100 = -2.70\%$. And, for the American roulette, the formula is $(35 - 37)/38 \times 100 = -5.26\%$.

Strategy #6: *Play the Best Bets and Avoid the Worst Bets*

So, you've learned how to calculate the odds of roulette. The next thing to consider is to only play with the best bets and avoid the worst ones. Speaking of the best bets, consider those whose odds almost mirror their payouts. The best bets are those whose odds are low, like the red, black, even, odd, low (numbers 1 to 18) and high (numbers 19 through 36). These odds actually allow you to win nearly half the time, so they provide you the best chance of winning.

Also, look also to play the bets where the en prison rule is offered on even-money bets. Know that the house edge on even money bets with the en prison rule and single zero is just 1.35 percent, making it the best bet on the roulette table.

When it comes to the worst bets, you should avoid all the single number bets, as well as the five-number bet of 0, 00, 1, 2, and 3, which usually have a terrible edge against the player of 7.89 percent. So, don't play with these bets.

Strategy #7: *Don't Believe in Roulette Myths*

There are a lot of myths when it comes to roulette. Perhaps the first of those is the notion of roulette systems which I have mentioned earlier. There is also the myth which states that all roulette wheels are the same. The truth is that, they are not. There are the European and American wheels to choose from and for many the best one to play is the European as your odds of success are better.

Another myth is that your luck in roulette will change and a number is due a hit. Well, these myths are by far the widely believed, leading to greater losses for players. These myths all stem from players believing that roulette is not a game of chance and there is some way of influencing the outcome of the next spin. The truth of the matter is, in the game of roulette, you cannot influence where the ball will land, so there's no way for you to believe on these common myths.

Strategy #8: *Manage Your Money Properly*

How to manage your money properly? Simply set your bankroll in advance. Then, play your bets with what you are prepared to lose. Once you have finished playing, that's it. Don't ever chase your losses for that won't help.

Strategy #9: *Know Your Objective and Motivation for Playing Roulette*

Before you play roulette, know your intention. Simply ask yourself why are you playing the game? Then, check your motivation. If you realize that you only want a fun and exciting time, then roulette is hard to beat. However, if your motivation is to make money, then play a game like blackjack, where the odds are more in your favor.

Simply know yourself!

Strategy #10: *Enjoy the Game and Have Fun*

Well, this final word is not really a strategy, but this is the overriding reason that you should play a game like roulette. So, enjoy the game, that's it!
